

Challenger™

Leading with Hi-O™ technology

Hi-O technology and your Challenger System

Reduced Installation Time

- Saves time and money for installers
- Lowers commissioning costs for End Users

Easy Trouble Shooting

- Less time spent diagnosing a fault lowers maintenance costs

Preventive Maintenance

- Save money by identifying potential faults before they become an issue

More Secure

- Encrypted communications around the door

Future Proof Investment

- Good technology match for Challenger
- Based on proven Controller Area Network (CAN) platform
- Non-proprietary

Features:

- Just one connection links all Hi-O devices around the door straight onto the GE Challenger Door Controller LAN
- Hi-O Alarms detected by GE's Forcefield management software
- Easy migration path: 4 door controller supports both conventional and Hi-O doors on the same LAN
- Non Hi-O devices and Challenger remote arming stations can be conveniently terminated at the same location as Hi-O devices

Challenger Hi-O configuration

For intelligent control and security of door environments.

Hi-O TECHNOLOGY™

Reduced installation time and complexity

- Less wiring/fewer terminations
- Plug 'n' play between door devices
- Easy troubleshooting from Hi-O Diagnostics Manager
- Plugs directly onto 4 door controller LAN
- Same programming steps as typical Challenger door
- Easily add non Hi-O inputs and outputs to door controller LAN

Plug 'n Play:

Adding new door devices to your Challenger system has never been easier. Just plug into the four wire cable and the new modules introduce themselves into the system (just like a USB device does with your PC). Based on the globally adopted CAN-bus, Hi-O devices utilise a proven, reliable, non-proprietary technology that will enhance your investment in Challenger into the future.
